

SHIVAM YADAV

SDE Intern | Node.js • Express.js • MongoDB • Python • JavaScript • REST APIs • DSA

Open to Relocate – Gurugram | Immediate Joiner | +91 7800634869 | shivamyadav2113128@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

SDE with ~9 months of production internship experience building and shipping Node.js/Express.js backend services, REST APIs, MongoDB data models, and Python automation scripts on live production systems. Strong JavaScript fundamentals, TypeScript, SQL (PostgreSQL), Redis, Docker, AWS, and CI/CD experience. Active DSA practice on LeetCode and CodeChef. Strong ownership mindset — built and deployed two full-stack projects end-to-end as a solo developer. Open to relocating to Gurugram and available to join immediately.

WORK EXPERIENCE

Backend Software Engineer Intern | Go Laddu | Bangalore, India (Hybrid)

Sep 2025 – Apr 2026

- Built and shipped backend services and REST APIs on production systems serving real customers — took ownership of features end-to-end, reducing average API response times by 40% through Redis caching and performance optimization.
- Designed RESTful APIs with Node.js-compatible patterns, JWT authentication, structured error handling, and MongoDB/PostgreSQL-backed persistent storage — debugged production issues and improved application reliability under live traffic.
- Wrote Python scripts for automation and data processing workflows; automated CI/CD pipelines using GitHub Actions for continuous integration, testing, and zero-downtime deployments on production infrastructure.
- Participated in code reviews and technical discussions with engineers — worked directly on systems used by real customers in a fast-moving startup environment that ships frequently.

Full Stack Developer Intern | Sankhyana Consultancy Services Pvt. Ltd. | Bangalore, India

Mar 2025 – May 2025

- Developed and optimized Node.js/Express.js REST APIs and MongoDB data models — reduced response latency by 150ms and improved application performance by 30% through query optimization and caching strategies.
- Built responsive React.js frontends with strong JavaScript (ES6+) fundamentals; collaborated with product and design teams using Git/GitHub to ship production-ready features within Agile sprint cycles.

PROJECTS

Learning Management System | Node.js • Express.js • MongoDB • Python • JavaScript • TypeScript • Redis • PostgreSQL/SQL • AWS • Docker • CI/CD | [GitHub](#)

- Built and shipped a production-grade Node.js/Express.js backend with MongoDB data modeling, REST API design, JWT authentication, RBAC, and Stripe Webhook payment automation — sole developer, full ownership from system design through deployment.
- Wrote Python scripts for internal data processing and automation tools; implemented Redis caching, API rate limiting, and performance optimizations — deployed on AWS EC2 with Docker, Nginx, PM2, and GitHub Actions CI/CD pipeline.
- Debugged production issues across the full stack — from MongoDB query bottlenecks to API response failures — and optimized application performance with TypeScript, RTK Query, and code splitting on the React.js frontend.

Provably Fair Plinko Game | Node.js • Express.js • MongoDB • Python • PostgreSQL/SQL • JavaScript • TypeScript • Git • Vitest | [GitHub](#)

- Built Node.js/Express.js REST APIs with MongoDB and PostgreSQL persistent storage — SHA-256 cryptographic fairness logic, real-time game state management, and Python automation scripts for data validation and testing.
- Wrote Vitest test suite ensuring deterministic backend outputs; applied strong DSA fundamentals (hashing, data structures, algorithm design) throughout — maintained structured Git/GitHub workflow with full version control.

TECHNICAL SKILLS

Must-Have: JavaScript (ES6+), Node.js, Express.js, MongoDB, Python 3, REST API Design, Git, GitHub, DSA

Nice-to-Have: TypeScript, PostgreSQL, MySQL, SQL, AWS (EC2, S3), Docker, Redis, CI/CD (GitHub Actions), React.js

Backend: JWT Auth, WebSockets, Background Jobs, Middleware, API Rate Limiting, Automation Scripts

Databases: MongoDB, PostgreSQL, MySQL, Redis — schema design, queries, data modeling, CRUD, optimization

Languages: JavaScript, Python, TypeScript, SQL, C++, Elixir

Practices: Agile/Scrum, Code Reviews, Debugging, Performance Optimization, TDD (Vitest/Jest), Clean Code

EDUCATION

B.Tech — Information Technology | Ajay Kumar Garg Engineering College, Uttar Pradesh Oct 2021 – Jul 2025

PROBLEM SOLVING & DSA

LeetCode: leetcode.com/u/shivamyadav2113128 **CodeChef:** codechef.com/users/strange_things **GitHub:** github.com/shivcodechef

Actively solving Data Structures & Algorithms problems — Arrays, HashMaps, Binary Search, Sliding Window, Trees, Dynamic Programming. Strong logical reasoning and problem-solving applied throughout internship and project work.
